Hunter Education Shooting Simulator

Moving Targets
Shot Placement
Fully Interactive

The Season Never Ends...

...on the BIG SCREEN!

Used By...

Hunter Education Instructors • Schools • Youth Organizations

To Teach...

Safety • Responsibility • Ethics

And Improve...

Shooting Skills • Decision Making • Marksmanship • Shot Placement

Think Before You Shoot...

Recorded video scenarios of game animals are presented to the student in their natural environment. The student evaluates the scenario and makes shooting decisions based on safety, responsibility and ethics. The "Think Before You Shoot" concept is the basis of the hunt.

Hunter Education Courseware:

Anatomy • Gun Actions • Grouping • Virtual Hunter

Shooter's Challenge:

Bullseye Blast • Varmint Town • Field Targets • Dove Shoot • Mallard Mania • Marksmanship Trainer
Pheasant Flush • Prairie Dog Hunt • Quail Crazy 3D • Speed Trap
Speed Trainer • Trap • Target Range • Timing Trainer • Western Shooting Gallery

HE-100 Includes:

100 Series Laser Detection Camera
Adult Rifle x 1 • Youth Rifle x 1
CD: Hunter Education Courseware
CD: Shooter's Challenge (15 games) (see HT-100 Brochure)
User's Manuals

Minimum PC Requirements:

2.4GHz PC • 256MB System RAM
NVidia/ATI Video Card w/64 MB RAM
4.4 GB Free Hardrive Space • CD-ROM
USB 1.0 Port • DirectX 9.0b
Windows XP Operating System

HUNTER EDUCATION COURSEWARE

The Laser Shot Hunter Education software package is an excellent tool for use in hunter training; using this package will help hunters improve the following skills and knowledge:

- Anatomy
- Gun Actions
- Marksmanship
- Virtual Hunting

We supply videos with this program where you evaluate the scenario and make decisions based on safety, responsibility, ethics and laws.

The “think before you shoot” concept is the basis of Hunter Education Training.

It is now possible to compose your own practice/education program within hunting and sport shooting. Programs based on your recorded video scenarios make it possible to introduce them into the program making your hunt customised to your requirements.

Anatomy

Using this simulation, shooters can see the inner organs and systems of American Antelope. Students can shoot, then ‘peel away’ skin, bone and organs to reveal shot placement. These animals although not exactly the same as South Africa’s Antelope are close enough for instructors to explain the small differences.

Gun Actions

This simulation demonstrates the internal workings of Rifles, Handguns etc. Clear views of the distinct internal parts of firearms are shown. Animations show how each part functions in the various stages of firearm actions: trigger squeeze, spent case discharge and reload. Included actions are Bolt, Lever, Pump, Breach and Semi-Automatic.

Marksmanship

Improve proficiency. Students must place a given number of shots within a specified circle diameter in order to succeed. Trainers can set the number of required shots, target distance, and required shot group radius. Results can be printed out for record keeping.

Virtual Hunter

Marksmanship, Target Acquisition, and Ethical Shooting skills with videos of live game animals. Choose to hunt such game as Eland, Wildebeest and Cape Buffalo. In each scene, students must quickly decide whether or not to shoot; each shot taken will be scored based on shot placement and on the wisdom of taking the shot. The images can be printed for later discussion or record keeping.
